AVAILABLE IN MORE COLORS

Product description:

Pink Filter for LED Lighting

Our LED light filter consists of **a dichroic filter which is made up of a transparent sheet**. This transparent sheet has a reflective coating on one of its surfaces that reflects the light to be filtered. By **varying the number and thickness of these layers, the filter can be adjusted to the desired shade**.

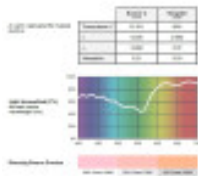

These filters offer unparalleled color purity, stability and longevity, making them an ideal decorative solution. Importantly, they have an accurate and consistent color from batch to batch.

The pink filter is especially suitable for butcher shops or venues that want to enhance pink tones.

They are sold in 1.22m x 0.5m, 1.22m x 1.5m, 1.22m x 1m lengths.

All filters are homologated.
