### Product short description:

The **Blue Filter** for LED **lighting** is especially suitable for commercial premises where you want to enhance or highlight the **blue color**. It cannot be installed in luminaires wider than 122 cm. It has the pertinent homologation. (132)

### Product description:

Blue Filter for LED Lighting

Our filters for LED lighting are composed of a dichroic filter which is formed by a transparent sheet. This transparent sheet has a reflective coating on one of its surfaces that reflects the light to be filtered. By varying the number and thickness of these layers, the filter can be adjusted to the desired shade.

These filters offer unparalleled color purity, stability and longevity, making them an ideal decorative solution. Importantly, they have an accurate and consistent color from batch to batch.

The blue filter is particularly suitable for commercial premises where the blue color is to be enhanced or highlighted.

They are sold in lengths of 1.22m x 0.5m, 1.22m x 1.5m, 1.22m x 1m.

All filters are approved.
